Minimum Relative humidity (%)	19	15	12	12	15
Maximum Relative humidity (%)	41	35	23	34	33
Wind velocity(km/hr)	12	9	16	23	23
Cumulative rains (mm)	09.00				

Agro Advisory: Based on the weather review of last week and the weather forecast for this week, the following advice is given to the farmer.

Specific advisory	<p>There is a possibility of Heavy rain / Duststorm /Thunderstorm/ Lightning accompanied with Hail & Squall (Speed 50-60 Kmph) at isolated places in coming days.</p> <p>Store the grains and commodities kept in the open in the Krishi Mandies in a safe place so that they can be saved from getting wet.</p> <p>Stay away from trees, poles and water sources during thunder and lightning and take shelter in a safe place.</p> <p>Conserve every drop of water and moisture for future.</p> <p>Apply Gypsum or well decomposed compost along with deep ploughing before onset of monsoon to reclaim alkali/sodic soils.</p>
--------------------------	---

Crop	Stage	Details	Agro Advisory
Groundnut	Preparation for sowing	Field preparation, sowing time and seed rate, fertilizers, varieties, seed treatment	Optimum sowing time of groundnut. Prepare land and arrange seed, fertilizer, implements etc. Use seed rate of groundnut at 20 kg per bigha. Keep row to row 30 cm spacing. Before sowing of ground nut, treat the seed with 2.5 g chlorotheloniol OR 2.0 g carbendizem per kg seed and to control termite treat the seed with 3.0 ml/kg imidacloprid. Then treat the seed with rhizobium and PSB culture @ 3 packets/ha. Use 44 kg urea and 200 kg SSP fertilizers for one hectare area as basal dose at the time of sowing. Use certified seed of improved varieties as HNG-10, TG37A etc.
Cucurbit Vegetables	Fruiting	Picking	Picking of cucurbits should be done at proper stage. Changes in colour of fruit, drying of stalk near fruit, thumping sound etc are important symptoms of ripening of fruits. Do not pick up fruits just after (12-24 hours) after irrigation. Avoid plucking of unripe fruits.
Fodder sorghum	1st cutting	Reduce toxicity of fodder sorghum	April sown sorghum may be poisonous due 'DHURIN' content which is harmful for animals. Therefore, cut and feed the sorghum to the animals after providing 2-3 irrigations or just after good rains.
Livestock		Food, Nutrition and health	Provide good quality drinking water to animals. Prepare and fed protein rich high nutritive urea – molasses bricks as per the guidance of registered veterinarian
Grain storage			Store the grain at or below 8 per cent moisture. Old gunny bags should be used after dry in sun light. Go dawn should be crack less and be fumigated @3g Celphos per 200 cubic fit before storing the grain then closed air tight. Go dawn should be safe from rats.
